1.INTRODUCTION

The Interactive Student Result Dashboard is a web-based application developed using HTML, CSS, and JavaScript. The main purpose of this project is to display and manage student academic results in a simple, interactive, and user-friendly way. It shows student marks, percentage, grade, and pass or fail status in an organized dashboard.

HTML is used to create the structure of the dashboard, CSS is used to design and make the interface responsive, and JavaScript is used to calculate results, search for students, display individual student details, and update the dashboard statistics. This project provides an easy way to view and analyze student performance digitally.

3.OUTPUT CODE

4.CONCLUSION

The Interactive Student Result Dashboard successfully demonstrates how HTML, CSS, and JavaScript can be combined to create a useful web application. The system makes it easier to view student marks, calculate percentages and grades, identify pass or fail results, and search for individual students.

This project also provides practical knowledge of web development concepts such as HTML structure, CSS styling, JavaScript functions, arrays, filtering, calculations, and dynamic content. Overall, the dashboard is a simple and effective solution for managing and presenting student results in an interactive format.
